FOR IMMEDIATE RELEASE

NOT ALL EVAPORATIVE COOLERS ARE CREATED EQUAL

Because portable evaporative coolers are not purchased frequently, you may not know what to **look for** and what **to avoid**, when buying one. Here are a few helpful tips to look for when purchasing.

1) How Thick is the cooling pad?

The thicker the pad, the more surface area there is available to cool the air which increases the temperature drop. Many manufacturers only use 2"- 6" pads. **COOLSPACE** uses 8" thick pads as well as adding an edge coating that increases the life span of the cooling pad.

2) Is there an automatic shut off on the pump? Or an Inline water filter?

If the water source is turned off or if the water reservoir runs dry during operation the pump is at risk of burning up. **COOLSPACE** puts an automatic shut off on the pump to prevent the risk of burning the pump up and avoiding time and money spent on replacing. Evaporative coolers clean the air in your shop by filtering the fresh air through the wet pads. The debris will work its way to the spray bar which will need to be regularly maintained or it will reduce the efficiency of the unit. **COOLSPACE** has an inline water filter catching the debris before it reaches the spray bar keeping the maintenance to a minimum.

3) How large is the water reservoir?

The size of the water reservoir can allow your cooler hours of operation without needing a hose connection or an extra water tank. Most coolers water reservoirs only hold a couple hours of operation without a hose connection or needing to refill. **COOLSPACE** has the largest built in water reservoir that is capable of operating up to 8 hrs without a water connection or a refill.

Besides asking these important questions when purchasing a portable evaporative cooler do not forget to ask about the length of the warranty, most manufacturers only offer a standard 1 year warranty. **COOLSPACE** offers a standard 2 year warranty and a 3 year warranty on the variable speed motor. So when you are shopping for a portable evaporative cooler be sure to call **COOLSPACE! (1-800-557-5716)**
