FOR IMMEDIATE RELEASE

February 14, 2007

COOLSPACE IS RIGHT ON TRACK WHEN IT COMES TO GLOBAL WARMING.

With our constant changing environment, hurricanes, tsunamis, drought and record breaking heat waves, the idea of global warming and gas emissions doesn't sound that far off. Not to mention the search for energy efficient products and the conservation of energy.

COOLSPACE cools down the heated debate on how to fix these global issues. With an old school idea and 21st century technology, **COOLSPACE** goes back to the basics of adding moisture to fresh air, resulting in temperature drops naturally. Using very little energy (no Freon or chemicals) with an average cost of less than a dollar a day to operate, **COOLSPACE** is leading the way with a "Patented Design" to reach the greatest temperature drops.

Automotive garages, air hangars, dry cleaners, industrial shops, professional sports teams, even the U.S. Military go to **COOLSPACE** for their portable evaporative cooling needs. No other company offers as many features: large water reservoirs "no hose required", low water shut-off "protects the pump", inline water filter, reservoir access and drain plug. Also offering many accessories to suit any application. **COOLSPACE** stands behind the quality with topnotch service and the "Longest Warranty in the Industry."

So keep your employees cool, save money & energy and help protect the environment with **COOLSPACE**.
